

The Budget Control Act of 2011 that outlined key provisions to reduce the nation's \$14 trillion deficit was signed into law on August 2, 2011. The Act calls for billions of dollars in cuts to defense and non-defense programs in FY 2011-2021, and established a Joint Select Committee on Deficit Reduction—popularly known as the “Super Committee”—tasked with identifying an additional \$1.5 trillion in “savings.” House and Senate Republican and Democratic leaders have selected Super Committee members and the committee deliberations are now underway.

Super Committee members face the daunting task of developing a proposal for Congress and the President to consider by November 23rd, 2011 that *must* reduce the deficit by at *least* \$1.2 trillion. Committee members can include a combination of revenue increasing measures and cuts to public programs to reach the desired target. Congress and the President must vote to pass the proposal by December 2011—without amendments—or automatic cuts will be triggered to defense and non-defense programs totaling the full \$1.2 trillion or the difference between the amount Congress passes and \$1.2 trillion.

While Medicaid, Medicare, the Supplemental Nutritional Assistance Program, and certain other public programs escaped the initial round of cuts and the trigger mechanism, the Super Committee has the full authority to target these programs in the \$1.2 trillion proposal they present to Congress and the President. CHC has developed the four recommendations outlined below to help guide deficit reduction discussions.

Solutions Must Address the Root Causes of the National Debt

A historical look at the federal deficit shows that prior to 2001, our government had a balanced budget and the country was expected to see a budget surplus from 2001-2010.¹ According to the Center on Budget and Policy Priorities, the country's detour into debt can be attributed to two main factors: 1) the series of tax cuts for corporations and the wealthiest Americans that were enacted in 2001 and 2003; and 2) the wars in Iraq and Afghanistan.² These tax policies account for almost half of the nation's \$14 trillion deficit.

Congressional members should pay close attention to the policies that produced the current deficit and start deficit reduction negotiations by eliminating and rejecting policies that put our country on the path to financial insecurity. Proposals must eliminate unnecessary tax exemptions for corporations and the wealthiest individuals.

Solutions Must Be Balanced and Include Revenue and Eliminate Costly Tax Entitlements

In April, Congress and the President cut more than \$38 billion from critical programs and departments while sparing the wealthy and larger corporations. The Budget Control Act required an additional \$900 billion in cuts from defense and non-defense programs through discretionary spending caps in FY 2011-2021.³ Lawmakers should therefore focus on a more balanced approach by raising revenue and eliminating unnecessary and costly tax exemptions to reduce the deficit.

A recent report by the Institute for Policy Studies found that of the 100 highest-paid corporate executives in the US, 25 earned more in pay than their company paid in federal income taxes in 2010.⁴ Among the 25 firms were Verizon, General Electric, Boeing and eBay. Every year, the US forgoes \$20 billion in revenues as a result of tax and accounting loopholes.⁵ The US cannot afford to continue to subsidize corporate tax giveaways that fail to produce jobs and safe communities.

According to the Internal Revenue Service, in 1995 the richest 400 Americans paid almost 30% of their income in federal taxes. By 2007, the number dropped significantly to just 17%.⁶ In contrast, incomes for the wealthiest 1% of Americans rose by 281% between 1979 and 2007. Tax inequalities undermine the nation's economic viability and prevent an equitable distribution of resources to meet the basic needs of communities.

There are a number of obvious revenue options:

- By allowing the current tax cuts for the richest 2% of Americans to expire as scheduled in 2013 while preserving tax credits for low- and middle-income families, the committee can pay down the debt by \$700 billion over the next 10 years.⁷
- Current tax loopholes allow multinational corporations to avoid paying taxes on foreign income and create an incentive for corporations to move jobs and operations out of the country. Eliminating this tax loophole would prevent our country from losing \$582.7 billion in 2012-2021.⁸
- Eliminating the domestic production deduction available for fossil fuels like oil, gas, and coal would raise an estimated \$18.7 billion from 2012-2021.⁹

Solutions Must Include Strategies to Lift Children and Families Out of Poverty

Racial and economic inequities deny millions of Americans the same access to opportunity and economic stability. More than 16 million children (22% of all children) in the US are living in poverty.¹⁰ Federally-supported programs like Medicaid, Medicare, the Supplemental Nutrition Assistance Program (SNAP), the Low Income Rental Assistance

program, and WIC help families meet their basic human needs and contribute to local economies. For example, Medicaid ensures access to needed medical care while minimizing medical debt at a time of unemployment or disability. Medical debt accounts for more than 60% of bankruptcies in the US pushing thousands into poverty each year.¹¹

The Super Committee should ensure that proposed cuts to public programs are designed to reduce the cost and improve the quality of programs without reducing benefits and services for communities, children, seniors, disabled individuals, and ethnic communities.

Some policies that help families stay out of poverty include:

- **Supplemental Nutrition Assistance Program:** With 90% of recipients living under the federal poverty line, SNAP has helped millions of families and over 2.4 million children afford an adequate, healthy diet in times of need.¹²
- **Head Start:** Early childhood programs like Head Start and child care subsidies ensure that parents who work in low-wage jobs get the help they need to maintain employment to support their families and that their children receive the support they need to stay safe and succeed.
- **Low-Income Housing Supports:** Public housing programs prevent more than 1.1 million low-income children, families, elderly people, and people with disabilities from becoming homeless and help alleviate high rent and housing costs for the most vulnerable.

Solutions Should Create Job Growth and Prevent Further Job Loss

In September, the Office of Management and Budget announced that the current 9% national unemployment rate will likely hold steady through 2012.¹³ Job loss across the nation is stifling economic activity and preventing our recovery. In considering deficit reduction proposals, the committee should preserve programs that foster job growth and fuel state and local economies. For example, the economic benefit of federally-supported programs such as Medicaid and Medicare extends beyond the individual and is a critical source of revenue for the healthcare and related industries that employ more than 14.3 million wage and salary workers in the US.¹⁴ It is expected that between 2008 and 2018, the healthcare industry will create an additional 3.2 million wage and salary jobs.

While all communities have been impacted by job loss, middle- and low-income families and ethnic communities have been disproportionately affected by under-employment, home foreclosure, and loss of access to healthcare. The Economic Policy Institute found that though roughly 31% of all US workers experienced unemployment or underemployment at some point in 2009, while African-American and Hispanic workers experienced higher rates at 36% and 41%, respectively. Similarly, whereas 14.3% of white children had an unemployed or underemployed parent in 2010, one in four African-American or Hispanic children had an underemployed parent.¹⁵

Super Committee members should advance solutions that put Americans back to work such as¹⁶

- Promoting public infrastructure projects and new technology that create jobs and rebuild communities
- Providing job training programs for unemployed and under-employed workers to compete in the global market

- Maintaining unemployment compensation for families and individuals
- Providing tax credits for small businesses that hire new employees, particularly unemployed workers.

Solutions Must Protect the Health of Communities

Chronic disease and preventable illnesses account for 75 percent of each healthcare dollar spent in the US and persistently reign as the leading causes of death. The obesity epidemic alone is expected to shorten the life expectancy of the next generation and increase medical costs by an *additional* \$66 billion *per year* by 2030—over half of which would be borne by the Medicare program. The rise in preventable illnesses is largely associated with the social and environmental conditions in which millions of Americans live and work. Many of these risk factors can be traced back to the deregulation and unregulated industry and sectors of our society and the lack of investment in our infrastructure including safe schools, parks and streets. There are no clearer examples than the preventable massive devastation and loss of life from Hurricane Katrina as a result of the lack of investment in the infrastructure or the impact of climate change on the agricultural industry and cost of food on grocery shelves. Building healthier communities is key to the nation’s health and economic recovery. Any critique of federal regulations on areas such as the environment, manufacturing, food and transportation safety must be based on a cost benefit analysis at the societal level and not simply industry profit margins. Deficit reduction must include an unwavering commitment to and investment in disease prevention, responsible economic development and creating sustainable communities.
